Introduction

Morgan Tucker is an exceptional young business with a big future. Our energy and commitment to a client focussed service is what sets us apart from our competitors and our philosophy of formulating long term professional relationships with our clients, suppliers and stakeholders means that we will become one of the key engineering consultancies in our sector.

We are set up to work any where in the UK and have business interests in Europe and throughout the Middle East.

Our business growth has been rapid and our ten-year plan is ambitious. I wholeheartedly believe that the success of any business is fully dependent on the quality and experience of its staff. I am confident that we have the best team of people in our industry and we will continue only to employ the highest calibre of individuals.

We have a substantial amount of experience of providing cost effective and high quality engineering consultancy services to the public and private sectors. We can offer a wide range of services and outputs to suit clients needs, whether it is detailed design and implementation or small feasibility reports.

The types of projects and the clients we work with are very diverse and we often work on projects where a wide range of skills are required. We insist on rigorous internal quality control of our work so that the client is in absolutely no doubt that reports, surveys and plans they receive from us are prepared to the highest standards and can be trusted completely. The concentration that we provide on internal quality issues and processes has been rewarded by the accreditation of our systems to the ISO9001 standard.

I am confident that we at Morgan Tucker will achieve our vision for the future which is to continue to provide an unrivalled service to our clients whilst maintaining our ambitious growth and development plans.

I hope you get the opportunity of working with us so that you can experience the high levels of service delivery we have already been giving to many of our clients.

Matthew Tucker -
Managing Director

Matthew Tucker

Company Vision

Morgan Tucker strongly believes in a partnering approach to business, offering clients a high quality, cost effective service and delivering the goods when our clients need them.

Before commissioning work we will always discuss our client's requirements and expectations and where necessary agree joint outputs and timescales. We believe that a partnering approach entails developing relationships which are responsive to the changing environment in which we work. Partnerships must always reflect the needs of the client but will offer the opportunity for stakeholders and others in the supply chain to be involved.

Our company ethos concentrates on our clients and staff – without either our business would not develop and improve. We will always work locally with clients to ensure we fully understand the issues and challenges that need addressing.

In order to ensure we continue to meet our company vision the business has adopted the following key strategies: -

- We will always ensure that our staff are the best in the industry who will have long term personal development plans, enabling them to share in the future success of the business.
- Morgan Tucker will always deliver what we say we will and provide accurate, clear and well presented documents, reports, drawings and plans.
- We will work with our clients to develop long-term relationships so they can benefit from the growth and development of Morgan Tucker.
- We will ensure that our staff receive relevant training and development, so that they have the skills needed to be able to advise our clients.
- Morgan Tucker will ensure that we have access to the most appropriate and modern technology and equipment to be able to undertake the services that we provide.
- We will work locally with community groups so that they too can benefit from the success of Morgan Tucker.
- We will continually develop and review our working practices to ensure we look after the environment and achieve sustainability.
- We will look after our staff and ensure that their efforts are recognised.

Range of Services

Morgan Tucker have developed a range of services with the intention of providing clients in the Public and Private sectors with the complete range of 'external' works. This approach ensures that clients will only need to deal with one organisation, reducing the opportunity for error or lack of communication between many parties.

The range of services has been designed specifically so that Morgan Tucker can use their high quality project management skills to progress schemes and projects in their entirety.

The structure of Morgan Tucker has been set up specifically to guarantee the efficiency and quality of work that our clients receive. Many services that we provide involve other complex issues and processes; our expertise enables us to reduce the amount of risk to our clients.

The three main groups of services that Morgan Tucker provide are: -

Highways, Traffic and Transportation

Development and Regeneration Services

Planning and Environment

Highways, Traffic and Transportation

A good quality highway and transportation infrastructure is crucial to the economic success and accessibility of an area, whilst ensuring the safety and benefit of its users. The layout, alignment and appearance of any highway and transport network must accommodate an ever increasing and wide ranging number of users.

Morgan Tucker can undertake a vast range of infrastructure services ranging from scheme feasibility, planning and design to major transportation strategies, multi modal studies and Local Transport Plan development.

Our highly qualified staff have a vast amount of experience of providing innovative and safe highway and infrastructure solutions to both the public and private sectors. We have undertaken a large number of projects to enable major new development and regeneration projects to be implemented, whilst at the same time working with Local Highway Authorities.

We have worked with a wide range of clients throughout the UK including large County Councils, Government Agencies, Developers, Blue Chip companies and other private organisations.

The range of Highways, Traffic and Transportation Services that we provide include;

- Highway Engineering
- Traffic Engineering
- Road Safety Engineering
- Infrastructure Design
- Traffic Signal Design
- Transport Planning
- Transport Assessments
- LTP and APR Development
- Junction Design
- Public Transport
- Road Safety Audits
- Travel Plans
- Traffic Data Collection and Analysis
- Network and Junction Modelling
- Multi Modal Studies
- Highway Asset Surveys
- Cycle and Pedestrian Facilities

Development and Regeneration Services

The quality of our built environment depends on a wide range of complex issues ranging from the architecture and appearance of buildings to the layout and effectiveness of our roads and infrastructure.

There are many issues that are essential to the development and economic growth of an area but these can too often be considered as an afterthought or as a barrier to progress.

Working alongside teams in other parts of the organisation, Morgan Tucker has delivered a wide range of Civil and Municipal Engineering projects aimed specifically at Development and Regeneration schemes. Our team of professionals have many years experience in the construction industry and have worked on many substantial schemes throughout the UK.

Our staff understand the processes and sensitivities that are often involved in progressing Development and Regeneration projects. We fully understand that the issues involved within this sector of the industry are often unique. Our experience and expertise means that we are able to adapt our services to meet project's individual requirements.

The range of Development and Regeneration Services that we provide include;

- Architectural Services
- Development Feasibility Studies
- Project Management
- Section 106 Agreements
- External Works Design
- Public Consultation
- Topographical Surveys
- Planning Supervisor
- Site Supervision
- Adoptable Road Design (Section 38)
- Adoptable Sewer Design (Section 104)
- Highway Design (Section 278)
- Infrastructure Design
- Private Drainage Design
- Site Setting Out

Planning and Environment

When implementing new infrastructure or development and regeneration proposals there are many planning and environmental processes to be followed during the scheme design and implementation process. The planning system has been set up to shape development for the benefit of the built environment and there are many Government guidelines and policies that must be adhered to.

The Planning and Environment section of the Morgan Tucker business has been developed specifically to co-ordinate the planning and environmental elements of infrastructure and development schemes.

It is essential that early consideration is given to the planning and environmental issues of large infrastructure projects as it is often not possible to resolve complex issues later in the design process without incurring significant cost and delay.

Again, working in conjunction with experienced teams in other parts of the business, Morgan Tucker is able to provide the expertise and project management that is required to manage the planning and environmental issues on large projects.

The range of Planning and Environment Services that we provide include;

- Master Planning
- Planning Statements
- Planning Advice
- Planning Applications and Appeals
- Landscape Architecture
- Ground Investigation
- Environmental Paving
- Flood Risk Assessments
- Environmental Impact Assessments
- Site Feasibility / Appraisal
- Sustainable Urban Drainage
- Design and Access Statements
- Public Realm Design
- Urban Regeneration
- Accessibility Studies

Sustainable Design

Morgan Tucker recognises that it has both a direct and indirect responsibility for the local and global environment. We know that environmental protection and enhancement, combined with sustainable use of resources and sustainable development are necessary to enable future generations to meet their own needs and benefit from an acceptable living environment.

Morgan Tucker operates an Environmental Management System accredited under EN ISO 14001 : 2004.

All schemes and design processes that Morgan Tucker work on will pay particular attention to the long term environmental impact and sustainability of the proposals. This not only ensures our obligations to the Environment can be satisfied but usually means that our clients benefit from a superior efficiency of scheme development and future maintenance.
